

## MONOLITHIC SILO

Lorandi's monolithic storage silo is manufactured in the tower at the Brescia production site, both in **AISI 304 Stainless Steel and Aluminum**. These silos are covered by numerous patents developed thanks to Lorandi's experience and technology in order to satisfy customer needs.

These silos are suitable for the storage of plastic granules, ground flakes and powders. They can be customized by means of a wide range of accessories such as load cells, vibrating bottom and level sensors.

The management and control of the Silos is carried out through the software developed and owned by LORANDI: Drive Silos®, equipped with PLC and remote solutions.

They can be manufactured in special versions (insulated silos) or mounted on a supporting structure for special needs.

They are characterized by rapid installation and optimized logistics.

Available diameters: 2,415, 3,000, 3,500, 3,800, 4,200 mm.

Maximum volume about 250 cubic meters.
